## Overview

Windows Curriculum Resource Kit (CRK) provides instructor resources, including PowerPoint presentation slides, experiments, hands-on labs, sample quizzes and assignments for introducing case studies from the Windows kernel into operating system courses.

The CRK follows the IEEE-CS/ACM Operating System Body of Knowledge; it is based on the book Windows Internals and adapted for university use by the book authors (Mark Russinovich and Dave Solomon) and Professor Andreas Polze, University Potsdam.

This release includes the Instructor Supplement for faculty/instructors use only.

For more information about the Windows Academic Program, CRK or faculty experiences see [this article](#) or e-mail [compsci@microsoft.com](mailto:compsci@microsoft.com).
